7. Aircraft Technology and Its Relation to Emissions

Executive Summary

7.1. Introduction

7.2. Aircraft Characteristics

- 7.2.1. Aircraft Design: Background
- 7.2.2. Aircraft Historical and Future Developments
- 7.2.3. Time Scales from Technology Development to End of Service Life
- 7.2.4. Summary of Aircraft Fuel-Efficiency Improvements

7.3. Airframe Performance and Technology

- 7.3.1. Aerodynamic Improvement
- 7.3.2. Airframe Weight Reduction
- 7.3.3. Nacelle Efficiency
- 7.3.4. Propulsion/Airframe Integration (PAI)
- 7.3.5. Control Systems
- 7.3.6. Operational Efficiencies by Design
- 7.3.7. Advanced Future Technologies

- 7.3.7.1. Laminar Flow Concepts
- 7.3.7.2. Other Aerodynamic Improvements
- 7.3.7.3. Weight Reduction
- 7.3.7.4. Aircraft Systems
- 7.3.7.5. Advanced Airframe Concepts

7.4. Engine Performance and Technology

- 7.4.1. Fundamental Thermodynamics
  - 7.4.1.1. Thermal Efficiency
  - 7.4.1.2. Propulsive and Overall Efficiency
- 7.4.2. Historical Trends
- 7.4.3. Future Development Paths for Aircraft Engines

7.5. Combustion Technology

- 7.5.1. Introduction
- 7.5.2. Gas Turbine Combustion System
  - 7.5.2.1. Combustor Features and Requirements
- 7.5.3. Production of Engine Emissions
- 7.5.4. Reduction of Emissions
  - 7.5.4.1. Earlier Developments
  - 7.5.4.2. Near-Term Technology
    - 7.5.4.2.1. General issues
    - 7.5.4.2.2. Combustor design considerations
    - 7.5.4.2.3. Achievements
  - 7.5.4.3. Longer-Term Technology
- 7.5.5. Future Technology Scenarios
- 7.5.6. Summary of Key Points Relating to Combustion Technology

7.6. Turbine and Nozzle Effects on Emissions

- 7.6.1. Chemical Processes in Turbine and Exhaust Nozzle
- 7.6.2. Aircraft Turbine and Nozzle Design
- 7.6.3. Chemical and Fluid Mechanical Effects
- 7.6.4. Current Understanding of Chemical Changes in Turbine and Exhaust Nozzle
  - 7.6.4.1. Primary Exhaust Constituents (H<sub>2</sub>O, CO<sub>2</sub>, N<sub>2</sub>, O<sub>2</sub>)
  - 7.6.4.2. Secondary Combustion Products (NO, NO<sub>2</sub>, N<sub>2</sub>O, SO<sub>2</sub>, CO, stable HC)
  - 7.6.4.3. Oxidation Products of Secondary Combustion Species (HNO<sub>2</sub>, HNO<sub>3</sub>, SO<sub>3</sub>, H<sub>2</sub>SO<sub>4</sub>, H<sub>2</sub>O<sub>2</sub>, HNO)
  - 7.6.4.4. Reactive Species (O, OH, HO<sub>2</sub>, SO, H<sub>2</sub>, H, N, CH)

7.7. Engine Emissions Database and Correlation

- 7.7.1. ICAO Engine Standards and Emission Database
- 7.7.2. Engine Load and Emission Correlation
  - 7.7.2.1. Emission Correlation Methods
  - 7.7.2.2. Simplified Alternate Correlation Methods
- 7.7.3. Validation of Emission Prediction Methods
  - 7.7.3.1. Altitude Chamber Testing
  - 7.7.3.2. Validation by In-Flight Measurement

- 7.7.4. Engine Emission Variations
- 7.8. Aviation Fuels**
  - 7.8.1. Databases on Fuel Properties
  - 7.8.2. Fuel Composition Effects on Emissions
  - 7.8.3. Historical Trends and Forecasts for Sulfur Content
  - 7.8.4. Alternative Fuels to Kerosene
  - 7.8.5. Summary
- 7.9. Small Aircraft, Engines, and APUs**
  - 7.9.1. Airframe Technology
  - 7.9.2. Aircraft Weight Reduction
  - 7.9.3. Engine Performance
  - 7.9.4. Engine Database
  - 7.9.5. Combustor Technology
    - 7.9.5.1. Historical Developments and Current Status
    - 7.9.5.2. Unique Combustors for Small Engines
    - 7.9.5.3. Current and Future Trends

- 7.10. Supersonic Transport Aircraft**
  - 7.10.1. Supersonic Transport Characteristics
  - 7.10.2. Propulsion System Efficiency
  - 7.10.3. Supersonic Propulsion System Characteristics
  - 7.10.4. Supersonic Transport Propulsion NO<sub>x</sub> Output
  - 7.10.5. Other Contaminants from Supersonic Transport Engines
  - 7.10.6. Supersonic Transport Operations
  - 7.10.7. Mitigation
- 7.11. Special Military Considerations**
  - 7.11.1. Differences Resulting from Operational and Design Features
    - 7.11.1.1. Combat Aircraft
    - 7.11.1.2. Military Transport
  - 7.11.2. Conclusion
