

Churches – Did you know that at The Florida 2014 Annual Conference of the United Methodist Church it was promoted that local churches adopt their watershed?

Sustainability – This is an old term. No longer can we look to sustain. We must restore.

University Students make up a large portion of the Gainesville population. We need to encourage more student involvement in the community to teach them how to protect the local environment.

How does the panel feel about “paying” for water? Not to be confused with delivery cost.

Do you believe that Alachua County should keep our present comprehensive plan without change?

Do local communities have the power to challenge large private landowners if their business use endangers the local community I.e. Bill Gates' and Frank Stronach's cattle and farming operations?

What is the economic impact of ecotourism in the county? International ecotourism was mentioned. Is Alachua County's resources marketed well? How is "eco" balanced with human impact of the "tourism"?

It is good to set aside land in a development but you still have a net loss of nature and we need to increase natural areas maybe think brownfield remediation and renovation

What is the ideal % of the count should be green space to counter the carbon impact today and in 10 years.

Solution. Only allow vertical development on footprint of existing development. True redevelopment. But, still need to provide restoration, for prior impact.
