INTRODUCTION

The following is a Report of the Water Quality Monitoring event for the 2nd Quarter-Annual period of 2025 at the Florence C&D facility, located in Gainesville, Florida. This report has been produced to comply with the facility's Permit Number 70754-011-SO, for the referenced site.

FIELD ACTIVITIES

On May 15, 2025, DOMINION sampling personnel mobilized to the site to conduct groundwater monitoring activities. Groundwater levels were collected at MW-1AR, MW-2, MW-3, MW-3R, MW-4, CW-4, CW-4A, CW-4D, MW-5, MW-6, MW-7, MW-8, CW-8, MW-14, and CW-15; as well as the temporary and assessment wells: TW-7, TW-8, and TW-11; and the off-site piezometers: P-12, P-13, and P-14. For this event, MW-13, which must be accessed via the adjacent church property, could not be accessed.

This event occurred during a period of seasonably low rainfall. The stormwater ponds on the west and southwest side were retaining low levels of water. Utilizing approximate elevations of this water, based on identified elevations of pond bottoms and pond banks, the groundwater/surface water interaction in these areas is interpolated.

The current permit called for the installation of three monitor wells screened in the upper Floridan Aquifer, which was expected to be at a depth range of 75-100 feet below land surface (bls). These were to be identified as MW-7D, CW-4D, and CW-15D, nested with the more shallow wells at the these three locations. However, when borings were advanced from April 1-4, 2025 by Environmental Drilling Service at the locations of MW-7D and CW-15D, clay was encountered from about 40 feet bls to total respective depths of 120 and 140 feet. Therefore, wells could not be installed at these locations. However, at CW-4D, the clay was from 42-80 feet bls, with water-bearing limestone and dolostone below it, such that a well could be set at 90 feet bls at this location. This well is now included in the monitoring program.

GROUNDWATER FLOW

The water level data is provided in Table 1. It is noted that monitor wells MW-2, MW-3, MW-5, MW-6, MW-7, MW-8, CW-8, MW-13, MW-14, P-12, P-13, and P-14 are screened in the unconsolidated sands, whereas MW-1AR, MW-3R, CW-4, CW-4A, MW-4, TW-7, TW-8, TW-11, and CW-15 are screened into the shallow rock zone beneath the unconsolidated sands. Although P-12 was designed as a 15-18 foot deep piezometer, the drill rig was met with refusal at the three locations where attempted and the piezometer was set at nine feet bls. Unless its groundwater elevation is above 114.8 ft, this piezometer can only be read as a “less than” water level data point. During this event, the water table was below this elevation at this location. As noted, CW-4D is set in the upper Floridan Aquifer. With only one well in this zone, groundwater flow direction cannot be calculated. It is noted, however, that the water level in this deep well is approximately seven feet lower than the surrounding shallow rock wells.

Based upon the data in Table 1, known field conditions, and historical groundwater elevation data, DOMINION has interpreted groundwater flow in these separated zones as represented on Figure 1. Groundwater flow in the shallow rock zone is across the west boundary of the edge of waste, toward the southwest. Groundwater flow in the unconsolidated deposits is also illustrated on this figure. Generally, recharge to this zone is from the southeast and discharge appears to be to the west/southwest and into the western stormwater pond. It is also identified that offsite areas to the north/northwest and west/northwest discharge into this pond. While retaining water, groundwater discharge from the unconsolidated zone in this area is likely via evapotranspiration through the permitted stormwater area.

As previously established, although installed in and is monitoring the shallow rock zone, the background well, MW-1AR is hydraulically disconnected from the zone being monitored downgradient of the landfill. In spite of and because of this, it can be considered an effective background water quality monitoring location.

QUALITY ASSURANCE

Samples were collected by DOMINION personnel, in a manner that is consistent with the FDEP,

Standard Operating Procedure, detailed in 62-160 of the Florida Administrative Code. Laboratory analyses were performed by Advanced Environmental Laboratories, which is a NELAC certified laboratory. Laboratory analytical reports are provided in Attachment A.

ANALYSES

Groundwater samples from the monitor wells were analyzed for the parameters listed in Appendix 3.2, except for the new monitor well, CW-4D, which was analyzed for background water quality in accordance with Rule 62-701.510(5)(b) and 62-701.730(8)(d), F.A.C. The laboratory analytical reports as well as the Groundwater Sampling Logs are provided in Attachment A. Table 2 summarizes concentrations of analytical parameters that were detected in the groundwater samples during this monitoring period and Table 2F is a summary of field-collected data. Applicable CTLs for these analytes, from Table I of 62-777, FAC, are listed below the analyte in Table 2. As shown in Table 2, aluminum, arsenic, iron, sodium, sulfate, and TDS were detected above their respective cleanup target level (CTL). From the expanded analyte list, only barium, vanadium, and acetone were detected but at concentration that were orders of magnitude below their CTLs. Further details of these results are discussed below.

The aluminum CTL of 0.2 milligrams per liter (mg/l) was exceeded in the samples from CW-4D, MW-6, MW-8, CW-8, MW-14, CW-15, and the background well, with the highest concentration in the CW-15 sample at 4.0 mg/l. The concentration in the background well was 2.4 mg/l.

The iron CTL was exceeded in the samples from MW-3, MW-3R, CW-4, CW-4A, CW-4D, MW-4, MW-6, MW-7, CW-8, and the background well, with the highest concentration in the sample from MW-7 at 13 mg/l. The concentration in the background well was 11 mg/l.

The CTL for SO₄ of 250 mg/l was exceeded in the samples from MW-3 and MW-3R at the respective concentrations of 460 and 280 mg/l.

The CTL for TDS of 500 mg/l was exceeded in all of the shallow rock well samples, except CW-15. It was also exceeded in the samples from MW-6, MW-7, MW-8, and the background well. Its highest concentration of 2100 mg/l was in the sample from MW-8.

Arsenic and sodium, which have CTLS of 0.01 and 160 mg/l, respectively, were detected at 0.038 and 180 mg/l respectively, in the sample from MW-8. Due to elevated detections in previous events, the compliance well, CW-8 was installed. As with the previous event, arsenic and sodium concentrations in the sample from CW-8 were below the CTLS at 0.0023 and 47 mg/l, respectively. This can be considered to be an indication that these metals are not migrating off site at concentrations in excess of their CTLS.

CONCLUSIONS & RECOMMENDATIONS

Groundwater data indicates that groundwater is migrating toward the site from the north and southeast. Monitor wells MW-2, MW-5, MW-6, MW-13, and MW-14 are interpreted as upgradient of the permitted landfill.

Although downgradient of the landfill, MW-8 is also downgradient of the property to the north. The compliance well, CW-8 was installed to monitor this condition.

Groundwater in the shallow rock zone discharges to the southwest. Data from the most downgradient well, CW-15, indicates that impacts to this zone are not migrating off-site.

As required by the permit, the Floridan Aquifer well, CW-4D was installed in April 2025. Other than high pH, which can be typical with a new well being influenced by non-stabilized grout and acetone, a common lab contaminant, that was detected at 8.8 µg/l, well below its CTL of 6300 µg/l, no new contaminants of concern were identified. Therefore, the permitted analytical list is not proposed to be expanded for any of the monitor wells.

DOMINION has identified:

- this site would be adequately monitored by semi-annual instead of quarter-annual events;
- multiple redundant upgradient wells that should be removed from water quality monitoring;
- a lack of landfill-related impacts identified in the sample from CW-4D and more than 40 ft of clay separating the shallow rock zone from the upper Floridan Aquifer, indicating that CW-4D is not necessary for predictive monitoring.

However, groundwater monitoring is proposed to continue as permitted.

Table 1. Groundwater Level Data (May 19, 2025)

Well Name	Reference Point Elevation	Screen Interval	Depth to Water	Groundwater Elevation
MW-1AR	118.16	79.2-89.2	17.32	100.84

RE: Workorder: J2507629 1503.01

Dear Paul Laymon:

Enclosed are the analytical results for sample(s) received by the laboratory on Tuesday May 20, 2025. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report. The analytical results for the samples contained in this report were submitted for analysis as outlined by the Chain of Custody and results pertain only to these samples.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Paul Gunsaulies
PGunsaulies@aellab.com

FINAL

Workorder: 1503.01 (J2507629)

Workorder Summary

Batch Comments

MSVj/12887 - 8260D Analysis,Water

The upper control criterion was exceeded for Bromomethane in Continuing Calibration Verification (CCV) standards for analytical batch 12887, indicating increased sensitivity. The client samples reported in this batch did not contain the analytes in question. Since the apparent problem equates to a potential high bias, the data quality is not affected. No further corrective action was required.

The Continuing Calibration Verification (CCV) standards were below the method acceptance of 80-120% for several target analytes. However, a Method Reporting Limit (MRL) standard was run at the end of the analytical sequence. Since the analytes in question were detected in the MRL standard, instrument sensitivity was documented. As the analytes in question were not detected in the field samples, the results are deemed acceptable.

MSVj/12936 - 8260D Analysis,Water

The Continuing Calibration Verification (CCV) standards were below the method acceptance of 80-120% for several target analytes. However, a Method Reporting Limit (MRL) standard was run at the end of the analytical sequence. Since the analytes in question were detected in the MRL standard, instrument sensitivity was documented. As the analytes in question were not detected in the field samples, the results are deemed acceptable.

The upper control criterion was exceeded for Carbon Disulfide and Vinyl Acetate in Continuing Calibration Verification (CCV) standards for analytical batch 12936, indicating increased sensitivity. The client samples reported in this batch did not contain the analytes in question. Since the apparent problem equates to a potential high bias, the data quality is not affected. No further corrective action was required. Samples that contained Carbon Disulfide were reanalyzed with passing criteria.

The spike recovery of Vinyl Acetate for the Laboratory Control Sample (LCS) and the Laboratory Control Sample Duplicate (LCSD) was outside the upper control criterion. The analyte in question was not detected in the associated client samples. The error associated with elevated recovery equates to a high bias. The sample data is not significantly affected. No further corrective action was required.

The relative percent difference (RPD) for Bromomethane and Iodomethane between the Laboratory Control Sample (LCS) and the Laboratory Control Sample Duplicate (LCSD) was outside control criteria due to relatively higher spike recovery in 5854479LCS in comparison with 5854480LCSD.

Spike recoveries in the LCS and LCSD were within acceptable limits, indicating the analytical batch was in control. No further corrective action was required.

MSVj/12938 - 8260D SIM Analysis,Water

The spike recovery of Ethylene Dibromide (EDB) for the Laboratory Control Sample Duplicate (LCSD) was outside the upper control criterion. The analyte in question was not detected in the associated client samples. The error associated with elevated recovery equates to a high bias. The sample data is not significantly affected. No further corrective action was required.

Task Comments

J2507629002 (MW-4) - WCAj/19058 - IC,E300.0,Water

J2507629002 was analyzed at dilution due to high conductivity. The lowest possible dilution was performed to prevent damage to the instrument.

J2507629006 (MW-3D) - WCAj/19058 - IC,E300.0,Water

J2507629006 was analyzed at dilution due to high conductivity. The lowest possible dilution was performed to prevent damage to the instrument.

J2507629007 (MW-3) - WCAj/19058 - IC,E300.0,Water

J2507629007 was analyzed at dilution due to high conductivity. The lowest possible dilution was performed to prevent damage to the instrument.

J2507629011 (MW-6) - WCAj/19058 - IC,E300.0,Water

J2507629011 was analyzed at dilution due to high conductivity. The lowest possible dilution was performed to prevent damage to the instrument.

J2507629012 (MW-1R) - MSVj/12887 - 8260D Analysis,Water

The upper control criterion was exceeded for the following surrogate in J2507629012: Bromofluorobenzene. Target analytes associated with the surrogate in question were not detected in the samples. The error associated with an elevated recovery equates to a high bias. The quality of the sample data is not significantly affected. No further corrective action was required.

FINAL

Workorder: 1503.01 (J2507629)

Workorder Summary

Task Comments

J2507629013 (MW-7) - WCAj/19058 - IC,E300.0,Water

J2507629013 was analyzed at dilution due to high conductivity. The lowest possible dilution was performed to prevent damage to the instrument.

J2507629015 (MW-8) - MSVj/12887 - 8260D Analysis,Water

The upper control criterion was exceeded for the following surrogate in J2507629015: Bromofluorobenzene. Target analytes associated with the surrogate in question were not detected in the samples. The error associated with an elevated recovery equates to a high bias. The quality of the sample data is not significantly affected. No further corrective action was required.

J2507629015 (MW-8) - WCAj/19058 - IC,E300.0,Water

J2507629015 was analyzed at dilution due to high conductivity. The lowest possible dilution was performed to prevent damage to the instrument.

Analysis Results Comments

J2507629003 (CW-4) - Nitrate (as N)

J2507629003 was analyzed at dilution due to high conductivity. The lowest possible dilution was performed to prevent damage to the instrument.

J2507629004 (CW-4A) - Nitrate (as N)

J2507629004 was analyzed at dilution due to high conductivity. The lowest possible dilution was performed to prevent damage to the instrument.

J2507629005 (CW-15) - Arsenic

Due to non-target background analytes, the proper quantitation of the internal standard in J2507629005 was obstructed. In order to return the internal standard to within acceptance limits, this sample was analyzed at a dilution.

J2507629011 (MW-6) - Aluminum

The matrix spike recovery of Aluminum for J2507629011 were outside control criteria due to the presence of target analytes in the sample. Recovery in the Laboratory Control Sample (LCS) was acceptable, which indicates the analytical batch was in control. The matrix spike outlier suggests a potential high bias in this matrix. The affected sample is qualified to indicate matrix interference.

J2507629011 (MW-6) - Ammonia (N)

The matrix spike and matrix spike duplicate percent recoveries applying to parent sample J2507629011 for NH₃ were (55%, 49%). The recoveries for both analytes in the Laboratory Control Sample were within the method required 90-110% range, indicating the batch was in control. The sample results have been qualified to indicate any matrix interference.

J2507629015 (MW-8) - Arsenic

Due to non-target background analytes, the proper quantitation of the internal standard in J2507629015 was obstructed. In order to return the internal standard to within acceptance limits, this sample was analyzed at a dilution.

Analytical Results

Analysis Results Comments

Ammonia (N)

The matrix spike and matrix spike duplicate percent recoveries applying to parent sample J2507529001 for NH₃ were (123%, 118%). The recoveries for both analytes in the Laboratory Control Sample were within the method required 90-110% range, indicating the batch was in control. The sample results have been qualified to indicate any matrix interference.
